ONSITE TRAINING COURSE

ONSITE ALLISON TRANSMISSION TRAINING OVERVIEW AVAILABLE TO ALL RTS CUSTOMERS

An Allison Transmission is a tough, highly sophisticated, and technically advanced transmission that has been engineered to last. It is designed to meet the wear and tear unique to your fleet's business. But even a transmission as tough as an Allison deserves the TLC necessary to maximize its uptime and lifecycle. Treat an Allison right, and it will treat you better than right by delivering the longest possible life, at the lowest possible maintenance cost over the course of its life. And Allison TLC begins with the technicians at your own shop. Educating your technicians is the key to a long, productive life for each and every one of your Allison transmissions.

Education is where RTS comes in. As your Allison Transmission Partner, we offer an extensive onsite training course that will properly educate your technicians on your Allison transmissions. Our RTS Onsite Training Course (OTC) will teach everything your technicians need to know in the basic maintenance of your Allison's to help provide the long-lasting life they deserve, and you desire. Specifically, your technicians will learn the following:

COURSE SYLLABUS

Allison Transmission Maintenance and Vehicle Inspections and Procedures.

Allison Transmission Troubleshooting/Diagnostic Procedures. Obtaining and using Diagnostic Codes.

Allison Diagnostic Software (DOC)

Hands-on practical use of the Diagnostic Software to enable Proper Troubleshooting to prevent needless transmission replacement.

Proper Transmission Replacement procedures, including Critical Vehicle Components, that affect transmission service life.

Live troubleshooting of a fleet vehicle by each student. Builds confidence in their ability to use knowledge acquired in class.

Questions & Answers. Questions will be answered with a full comprehensive understanding, the day of the class, and every day thereafter.

This course is free to RTS customers (T&L expenses may apply). Why do we do this? Because Allison is all we do.™ And a mistreated Allison due to lack of training is both unnecessary and expensive to you, our customer, and we just cannot live with that.
